Manta

Ethernet Station

## Starfish Ethernet Access Point

Starfish connects Manta 500EN and/or Grouper 200LTS stations to a wired Ethernet infrastructure network.

Designed to mount on the wall of your wiring closet, each Starfish provides access for up to 31 EtherTalk and/or LocalTalk stations directly to the Ethernet backbone. Starfish can be attached to the Ethernet network via standard 10BaseT or AUI ports. Configuration is simple using Digital Ocean's Grouper Administrator's Program.

## Manta 500EN Ethernet Remote Station

Manta 500EN is a wireless station for use with Digital Ocean's Starfish Access Point. Designed to mount on a PowerBook, partition, printer, or on the desktop, Manta connects to your AAUI port, and provides wireless access to your Ethernet infrastructure.

## Grouper 200LTS LocalTalk Remote Station

Grouper 200LTS is a wireless remote station for use with Starfish. Designed to mount on a PowerBook or Duo, partition, printer, or on the desktop, Grouper 200LTS connects to your LocalTalk port, modifies the protocol to support Ethernet compatibility and provides wireless access to your Ethernet network.

All remote station products are powered by NiCad rechargeable batteries or an AC adapter. Configuration is simple—just plug in Manta or Grouper, select the standard LocalTalk or EtherTalk driver on your Mac, and access the Ethernet network.
